

# 14.3 IEC 60870-5-101 Slave

## Configuring datapoints (slave)

The IEC 60870-5-101 Slave in WCC Lite has to be configured in Excel. This configuration contains two Excel sheets where parameters must be filled in *Devices* and *Signals*.

### *IEC 60870-5-101 slave parameters for Devices tab*

Parameter	Type	Description	Required	Default value (when not specified)	Range	
					Min	Max
name	string	User-friendly name for a device	Yes			
description	string	Description of a device	No			
device_alias	string	Alphanumeric string to identify a device	Yes			
enable	boolean	Enabling/disabling of a device	No	1	0	1
protocol	string	Protocol to be used	Yes		IEC 60870-5-101 slave	
device	string	Communication port	Yes		PORT1	PORT2
baudrate	integer	Communication speed (bauds/s)	No	9600	300, 600, 1200, 2400, 4800, 9600, 19200, 38400, 57600, 115200	
databits	integer	Data bit count for communication	No	8	6	9
stopbits	integer	Stop bit count for communication	No	1	1	2
parity	string	Communication parity option	No	none	none, even, odd	
flowcontrol	string	Number of requests, before the link is considered lost (device status signals are changed) and reconnect attempt will be issued	No	none	none	
link_address	integer	Destination address when in transmit and source address when broadcasting	Yes		0	65535
link_size	integer	Link address size in bytes	No	1	1	2
asdu_size	integer	Common address size in bytes	No	1	1	2
ioa_size	integer	Information object address (IOA) size in bytes	No	2	1	3

cot_size	integer	Cause of transmission (COT) size in bytes	No	1	1	2
time_sync	boolean	Allow time synchronization, 1 to enable and 0 to disable	Yes		0	1
message_size	integer	Maximum length of a message	No	253	0	255
cache_size	integer	Maximum number of events to store in a buffer	No	100	0	1000
respond_delay	integer	Time in microseconds to wait before sending responses	No	100	0	1000000
single_byte_ack	boolean	Use single character acknowledge, 1 to enable and 0 to disable	No	0	0	1
keep_alive_timeout	integer	Time interval in seconds before serial connection is considered offline	No	60		

**keep\_alive\_timeout** timer is used for the connection tracker to display protocol status. This parameter does not affect protocol functionality and only tracks its status in the connection tracker.

## IEC 60870-5-101 slave parameters for Signals tab

Parameter	Type	Description	Required	Default value (when not specified)	Range	
					Min	Max
signal_name	string	User-friendly signal name	Yes			
device_alias	string	Alphanumeric string to identify a device	Yes			
signal_alias	string	Unique alphanumeric name of the signal to be Yes used	Yes			
source_device_alias	string	device_alias of a source device	For commands			
source_signal_aliases	string	signal_alias of a source signal	For commands			
enable	boolean	Enabling/disabling of an individual signal	No	1	0	1
log	integer	Allow signal to be logged. If the <b>log is 0, the signal</b> will not be logged. If the <b>log is more than 0, the</b> signal will be logged	No	0		
gi	boolean	Including/excluding (1 or 0) signals from General Interrogation	No	0	0	1
common_address	integer	Address of a destination device	Yes			
info_address	integer	Information object address	Yes			

data_type	integer	ASDU type identifier	Yes		1, 2, 3, 4, 5, 6, 9, 10, 11, 12, 13, 14, 30, 31, 32, 34, 35, 36, 45, 46, 47, 48, 49, 50, 58, 59, 60, 61, 62, 63
periodic_update_ms	integer	Signal value is published periodically according to the value set.	No	-	-
select_ms	integer	Time limit in milliseconds for command execution. Command selection has to be performed before execution if this parameter is specified. Direct command execution can be performed only if this field is left empty or set to zero.	No	0	
tag_job_todo	string	The device status signal can be configured by providing given value	No	No	communication_status

## Device status signals

IEC 60870-5-101 has an additional signal which can be configured to show communication status. It indicates if the master device has disconnected from the slave (WCC Lite). To configure such signal for IEC 60870-5-101 protocol, `job_todo` and `tag_job_todo` fields with string values are required. For IEC 60870-5-101 slave required parameters for status, signal will be: **signal\_name**, **device\_alias**, **signal\_alias**, and **tag\_job\_todo**. `Tag_job_todo` value must be: **communication\_status**. If the signal returns the value of 1 – the device or protocol connection is on and working correctly, if 2 – the device is off or the protocol is disconnected.

# Debugging an IEC 60870-5-101 slave application

If the configuration for IEC 60870-5-101 devices is set up, the handler for the protocol will start automatically. If the configuration is missing parameters or contains errors, the protocol will not start. It is done intentionally to decrease unnecessary memory usage.

If IEC 60870-5-101 does not work properly (e.g. no communication between devices, data is corrupted, etc.), a user can launch a debug session from the command-line interface and find out why the link is not functioning properly. To launch a debugging session, a user should stop the *iec101-slave* process and run the *iec101-slave* command with respective flags as shown in the table below.

Procedure for IEC 60870-5-101 slave service debugging:

- **Step 1:** Service must be stopped by entering the following command into the WCC Lite:

```
/etc/init.d/iec101-slave stop
```

- **Step 2:** After the service is stopped it must be started with the preferred configuration file (JSON files found in `/etc/` folder) and a debug level 7:

```
iec101-slave -c /etc/iec101-slave/ttyPORT2.json -d7
```

Additional output forming options are described here: Command line arguments.

- **Step 3:** Once the problem is diagnosed normal operations can be resumed with the following command:

```
/etc/init.d/iec101-slave start
```

## IEC 60870-5-101 command line debugging options

```
-h [ -help ] Display help information
-V [ -version ] Show version
-d<debug level> Set debugging level
-c [ -config ] Config path
-e [ -redis ] Show redis debug information
```
