Connection To PC

When you connect **THE VINCI EXPERT** to a computer a normally operating system in hardware should find 4 Virtual Com Ports (VCP). First Com port for communication with SIDE A and Second for communication with SIDE B, as described in the Function scheme. Other VCP's are reserved. All serial interfaces RS232, RS485 and Fiber Optic supports baud rates up to 115200 bps.

The drivers of newer versions of Windows (starting from Windows XP), Linux and Mac OS are detected automatically; if you use older versions or other type of OS, please visit our webpage: www.the-vinci.com
